Untuk mengekalkan kekuatan cukup hanya makan sebiji seminggu.

Walaupun bagaimanapun bagi mereka yang aktif didalam hubungan seks mungkin perlu makan sebiji selang sehari. Ini bergantung kepada setiap pengguna untuk menilai kekuatan diri sendiri. Dosage nyer perlulah disesuaikan mengikut keperluan.

KELEBIHAN SMILAX MYOSOTIFLORA (UBI JAGA)

Smilax Myosotiflora

Smilax myosotiflora atau 'Ubi Jaga' telah digunakan secara tradisional oleh orang asli dan Melayu sebagai makan tambahan untuk ransangan seks.

Ubi Jaga adalah tumbuhan merayap yang tumbuh didalam hutan tropika di Asia Tenggara. Ianya dipercayai boleh membantu pengedaran darah yang sempurna. Secara tradisional ianya digunakan sebagai ubat herbal tradisional untuk menguatkan tenaga lelaki, sebagai tonik untuk menambahkan metabolisma badan.

Ia boleh membantu menambahkan keinginan seks, menambahkan sensitiviti, menguatkan kekerasan dan membolehkan lelaki pelbagai umur untuk menikmati seks yang lebih kerap dan lebih lama.

Khasiatnya yang lain juga termasuk mengimbangkan mood, membantu tekanan darah yang sehat dan meningkatkan tahap tenaga. Ianya sudah tentu akan membantu didalam perhubungan intim. Sains perubatan kini mula menyedari kebaikan herba tradisional ini.

Ubi Jaga also known as *Smilax Myosofolia* is a natural source of aphrodisiac used widely in Malaysia . Its leaves and fruit when boiled can be used to cure syphilis and fever. Ubi Jaga can also improve blood circulation and build resistance against bacteria.

Ubi Jaga (Smilax Myosotiflora)

Kegunaan utama ubi jaga ialah sebagai afrodisiak untuk meransang seks. Untuk tujuan ini ubi yang juga merupakan akarnya digunakan. Daun dan buahnya boleh digunakan sebagai penawar penyakit siflis dengan cara merebus daun dan buah ubi jaga dan airnya diminum. Ia juga boleh mengubat demam dengan kaedah yang sama.

PIPER CUBEBA (Java Pepper)

[Buku Hikayat Seribu Satu Malam](#), telah menyebut Piper Cubeba sebagai bahan utama didalam pembikinan ubat perangsang bagi mereka yang kurang subur.

Campuran Piper Cubeba telah diberikan kepada Shams-al-Din, seorang pedagang kaya yang tidak mempunyai anak dengan arahan supaya memakannya dua jam sebelum bersama dengan isterinya. Mengikut hikayat tersebut, pedagang itu berjaya mendapat anak setelah ia mengikut arahan yang diberikan.. Penulis Arab yang lain ada menulis bahawa Piper Cubeba akan membuatkan nafas berbau wangi, menyembuh jangkitan kuman pada pundi kencing dan memakannya akan "menambah kenikmatan ketika mengadakan hubungan intim".

[Buku Hikayat Seribu Satu Malam](#), yang dikarang pada kurun ke9 ada menyebut Piper Cubeba digunakan sebagai penawar kepada ketidaksuburan, ini menunjukkan bahawa ianya telah digunakan oleh orang-orang Arab sebagai bahan perubatan.

Di India, tulisan Sanskrit ada menyebut tentang Piper Cubeba didalam pelbagai jenis perubatan. Charaka dan Sushruta menggalak penggunaan Cubeba sebagai pencuci mulut dan penggunaan Cubeba untuk kesihatan mulut dan gigi, kehilangan suara, demam dan batuk-batuk.

Ahli perubatan Unani pula menggunakan paste Cubeba untuk disapu pada alat sulit lelaki dan wanita untuk menambahkan kelazatan semasa membuat hubungan. Disebabkan oleh khasiat-khasiat yang terdapat didalam Piper Cubeba ini maka ianya juga digelar sebagai "Habb-ul-Uruus".

Piper Cubeba demonstrates anti-estrogenic and anti-inflammatory properties.

Full Abstract

This present study aims to investigate if P9605, an ethanolic extract of PIPER CUBEBA L, exhibits anti-estrogenic and anti-inflammatory properties. We found that P9605 significantly inhibited growth induced by beta-estradiol in MCF-7, a human breast cancer cell line. It inhibited aromatase activity, which is responsible for transforming

androgens into estrogens. Competitive binding assays also indicated P9605 binding to both human recombinant estrogen α and β receptors. Furthermore, this extract inhibited the activities of cyclooxygenases (COX-1 and COX-2) and 5-lipo-oxygenase (5-LOX), also it attenuated the induction of interleukin 6 (IL-6) in differentiated THP-1 cells stimulated by lipopolysaccharide (LPS). Taken together with our previous results, P9605 possesses anti-androgenic, anti-estrogenic and anti-inflammatory properties. These results support the potential use of P9605 in phytotherapy against benign prostatic hyperplasia (BPH).

Benefits of Piper Cubeba as Medicinal Herbs

Piper Cubeba is considered a carminative, diuretic, expectorant, stimulant, and antiseptic. Cubeb Berry has been shown to be effective in easing the symptoms of chronic bronchitis. It is also used for digestive ailments and is effective in treating dysentery. Cubeb Berry also has a local stimulating effect on the mucous membranes of the urinary and respiratory tracts. The herb has often been associated with the reproductive system and has been used to treat cystitis, leucorrhea, urethritis and prostate infections. Cubeb oil is effective against influenza virus and *Bacillus typhosus*. It is good stimulant of the body organs due to presence of astringent and bitter taste.

Cubeb Berries

Cubeb Berries: Cubeb Berries (*Piper cubeba*) are the peppercorn sized berries of a climbing perennial vine. Cubeb berries have their stalks still attached and so are sometimes called "Tailed Pepper". They have an aroma and flavor similar to peppercorns, but with a note of allspice. Cubeb berries are grown primarily in Indonesia (hence the name Java Pepper), and are very popular in China and the Middle East. The berries go well with meats, vegetables and cheeses, and add a little aromatic flavor when substituted for pepper, and a little pepper heat when substituted for allspice. The berries should be ground fresh, they retain more

flavor whole and quickly lose volatile oils when ground. The berries' pungent flavor with a touch of bitterness and camphor make it a specialty item. It became less popular in the 1600's after the introduction of black and white peppercorns as their milder flavor and lack of bitterness made them a preferred condiment. Cubeb is still used in the flavoring of cigarettes and spirits like gin and vodka and incense.

Cubeb berries are reported to have medicinal properties. They are rumored to be an aphrodisiac and aid with fertility issues, and has been used in the treatment of ailments like lack of appetite, demonic possession, chronic bronchitis, oral and dental diseases, fever, bad breath, infection.... It was popular among alchemists in the Middle Ages. In China the berries are used primarily for medicinal purposes. Cubeb concoctions are common as aphrodisiacs. There are many stories of it's use as a sexual stimulant and fertility aid. Cubeb contains volatile oils that give it a camphorous aroma, probably responsible for it's potential as a pulmonary remedy. As late as World War II, cubeb cigarettes were still being made and recommended as a remedy for asthma and hay fever. Many love potions include the berries, as a stimulant and beneficial to the urinary tract and prostate it's positive properties continue to feed it's reputation as an effective herb for fighting fertility problems.

Cubeb Berries Facts:

- Resemble peppercorns but have a stalk or "tail"
- Peppery flavor with a hint of allspice
- Grown primarily in Java and Sumatra
- Volatile oils give cubeb a champhorous aroma
- Moderate heat, 3 on a scale of 10
- Rumored to have MANY health benefits
- Used in cigarettes and spirits like gin or vodka
- Historically used as an aphrodisiac or fertility aid
- Considered beneficial for asthma and chronic bronchitis
- Use fell off in the 17th century when black and white pepper became more readily available and less expensive

Cubeb Health Benefits:

- Infertility
- Sexual Dysfunction
- STD's
- Aphrodesiac
- Chronic Bronchitis
- Astma
- Infection
- Restores Appetite
- Exorcises Demons
- Treat Oral & Dental Ailments
- Ailments of the Throat
- Antiseptic
- Diuretic
- Urinary & Kidney Benefits
- Hay Fever Remedy
- Anti-aging properties
- Treats Digestive Ailments & Dysentery
- Prostate Infections
